

Your drawing. Our shop. *Any local crew.*

We turn the pergola or pavilion on your plan into a pre-cut Douglas fir kit and ship it to any job site in the US. We make every cut in our shop, so the detail you drew survives whoever the client hires.

How a kit comes together

1 Send the drawing

Your plan, a sketch, or photos with rough sizes. We send back a free 3D model and a written kit quote.

2 We engineer and cut

Once you approve the model, we engineer it for the site and cut every piece in our shop.

3 We ship it to the site

One freight pallet: labeled Douglas fir, stainless hardware, stamped engineering drawings for the permit, and an assembly guide.

4 A local crew raises it

No cutting on site, and it often goes up in a day. No crew yet? We'll help find one and stay on the phone through the raising.

Send us a drawing.

We'll send back a 3D model and a written kit quote, free.
